SUMMARY

Machine learning engineer driven to turn ambiguous technical problems into solutions stakeholders can act on, built across research labs, a startup, and enterprise consulting. B.S. & M.S. in Electrical Engineering with a specialization in machine learning, pattern recognition and signal processing.

TECHNICAL SKILLS

Languages: Python, C, MATLAB, Bash, JSON

Software Tools: PyTorch, TensorFlow, scikit-learn, OpenCV, NumPy, pandas, Git, Docker, Linux, AWS

WORK EXPERIENCE

Deloitte US Consulting | Strategy Analyst

New York, NY | Sep 2025 – Present

- Led the analytical architecture and pricing logic for a board-level pricing transformation program for a Fortune 500 electrical distributor, generating \$23M in client value through scalable pricing analytics and automation.
- Designed the business case and solution architecture for an AI-enabled pre-deal modeling & post-deal analytics software supporting contract strategy, rebate agreements, and GTN forecasting for a pharmaceutical company.

Irisight | Cofounder

Chicago, IL | Jan 2025 – Jan 2026

- Built a computer vision platform for markerless walk analysis and fall-risk assessment using smartphone video.
- Conducted customer discovery with 30+ physical therapists, translating clinical workflows into AI-enabled software requirements and product design priorities.
- Selected as one of 9 startups from 100 applicants for Northwestern's Accelerator for early stage ventures and awarded \$10K in non-dilutive funding.

Liquid Rocketry Lab | Principal Firmware Engineer

Raleigh, NC | Nov 2022 – Jan 2024

- Led firmware development for a 150+ member propulsion team developing a liquid-fueled rocket targeting the Kármán line, coordinating embedded software across mission-critical subsystems.
- Developed embedded drivers in FreeRTOS for a Hercules microcontroller, acquiring sensor data over RS-485 and streaming real-time telemetry via UDP for mission-critical propulsion testing.

RESEARCH

KDD Laboratory University of Athens | Research Assistant

Athens, Greece | Mar 2025 – Sep 2025

- Developed an Agent-as-a-Judge guided RAG pipeline to benchmarking LLMs on software engineering tasks.
- Created standardized prompts and evaluation rubrics to measure solution quality, reasoning ability, and accuracy.

Wearable Sensing Laboratory | Research Assistant

Raleigh, NC | Aug 2023 – Sep 2025

- Developed an embedded machine learning pipeline for deploying neural networks to the MAX78000 AI MCU.
- Automated benchmarking framework measuring latency, power, and embedded NN classification accuracy.

TECHNICAL PROJECTS

Multi-Label Cardiac Arrhythmia Detection

Feb 2025 – Aug 2025

- Developed an end-to-end deep learning pipeline to classify multiple cardiac abnormalities from 12-lead ECG signals using patient-level data splitting and class-imbalance handling.
- Designed a novel GSNR-based approach to predict final neural network performance after the first training epoch, eliminating the need to fully train candidate models during architecture search.

EDUCATION

North Carolina State University | Raleigh, NC

M.S. EE: May 2026

B.S. & M.S., Electrical Engineering

M.S. GPA: 3.71/4.0 | B.S. GPA: 3.75/4.0

Specialization: Machine Learning, Pattern Recognition & Signal Processing

University Honors Program
